Profile

Forward-thinking Software Engineering student at King Saud University with a strong foundation in software engineering and digital solutions. Technical expertise spans Java, Laravel, and React, demonstrated by the development of complex systems including a custom Requirements Traceability Management System. Skilled in bridging the gap between business needs and technical implementation, with practical experience in project organization using tools like Trello. Eager to leverage a versatile skillset in full-stack development and process optimization

Education

Software Engineering GPA:4.45/5, King Saud University 2022 – Present
Riyadh, Saudi Arabia

Skills

- **Languages:** Java, TypeScript, JavaScript (ES6+), PHP, HTML5, CSS3, SQL.
- **Frontend:** React.js, Vite, Tailwind CSS, Framer Motion, Inertia.js.
- **Backend:** Node.js, Express.js, Laravel, Spring Boot, Google Cloud Functions.
- **Cloud & Database:** Firebase (Auth, Firestore, Storage, Hosting), MySQL.
- **Tools:** Git/GitHub, Postman, Figma, Trello, Vercel.
- **Soft Skills:** Agile/Scrum Methodology, Requirement Analysis, Technical Documentation, Project Management, Problem Solving, Cross-Functional Communication.
- **Other:** Google Generative AI Integration, Internationalization (i18n).

Languages

- Arabic
- English

Certifications

Get Started with Databricks for Generative AI, Databricks Academy Jan 2026
Get Started with Databricks for Machine Learning, Databricks Academy Jan 2026
Get Started with Databricks for Platform Administration, Databricks Academy Feb 2026

Projects

ClassBond | Full Stack Developer & Data Analyst

- Developed an educational web app using React and Firebase to facilitate anonymous student-professor interaction in an Agile environment.
- Designed real-time data dashboards to visualize feedback trends, helping professors identify and resolve learning hurdles.

Frenchify | Full Stack Developer

- Developed a Freemium E-Learning LMS using React, Node.js, and Firebase, featuring a "Netflix-style" global subscription model.
- Engineered role-based dashboards for Teachers to manage course content (video/audio) and Admins to oversee user approvals and monetization.
- Implemented secure backend logic with Cloud Functions and Firestore Security Rules to enforce strict data access between free and paid tiers.

SAY (Start All Yourself) | Full Stack Developer

- Built a comprehensive developer resource platform using React, TypeScript, and Tailwind CSS to guide users through modern tech stacks and AI tools.
- Integrated Google Generative AI to power an interactive "Prompt Tester," enabling developers to experiment with and refine AI prompts directly within the app.
- Implemented advanced frontend features including Internationalization (i18n) for multi-language support and Framer Motion for smooth, responsive animations.
