

Abdalla Ammar

Software Engineer

Riyadh , Saudi Arabia | +966551124480 | ammammar.tech@gmail.com | linkedin | github.com/bido-dev | Portfolio

Summary

Software Engineering student at King Saud University (GPA: 4.45/5) specializing in bridging product vision with technical execution. Proven expertise in full-stack development, scalable system architectures, and agile product workflows. Actively seeking a CO-OP role in Full-Stack, Backend, or Technical Product Management.

Education

Software Engineering GPA:4.45/5, King Saud University 2022 – Present | Riyadh, Saudi Arabia

Experience

Technical Product Manager, Google Developer Groups (GDG) Club – KSU 03/2026 – Present

- Led cross-functional engineering teams through the full product lifecycle utilizing Agile Scrum methodologies.
- Authored Product Requirements Documents and managed product backlogs via GitHub Projects.
- Drove system architecture design, streamlined repository setup, and configured CI/CD automation.

Projects

Reqify | Full Stack Developer 09/2025 – Present

- Engineered a Notion-inspired API management and traceability platform using Laravel, React, and PostgreSQL JSONB for dynamic data modeling.
- Implemented Depth-First Search (DFS) algorithms to automatically detect and prevent circular dependencies within traceability graphs.
- Integrated Cytoscape.js for interactive impact analysis and complex artifact visualization.

SAY (Start All Yourself) | Full Stack Developer 12/2025 – 01/2026

- Built a comprehensive developer enablement platform featuring a dynamic AI prompt engine powered by Google Generative AI (Gemini).
- Programmed complex generation logic with strict tech-stack constraints to automatically draft Agile User Stories and PRDs.

ClassBond | Full Stack Developer & Data Analyst 09/2025 – Present

- Architected a hybrid real-time educational platform, transitioning from a Firebase prototype to a production Laravel/ PostgreSQL backend after validating interfaces across 15+ live university lectures.
- Engineered a multi-tenant database schema with strict Role-Based Access Control (RBAC) to ensure secure organizational data isolation.
- Implemented a stateless TOTP 2FA security model seamlessly combining Laravel Sanctum and Firebase Custom Tokens.

Frenchify | Full Stack Developer 02/2026 – Present

- Developed a Freemium E-Learning LMS using React, Node.js, and Firebase, featuring a "Netflix-style" global subscription model.
- Engineered role-based dashboards for Teachers to manage course content (video/audio) and Admins to oversee user approvals and monetization.
- Implemented secure backend logic with Cloud Functions and Firestore Security Rules to enforce strict data access between free and paid tiers.

Skills

- **Languages:** TypeScript, JavaScript (ES6+), Java, PHP, SQL, HTML5/CSS3.
- **Frontend:** React.js, Next.js, Tailwind CSS, Framer Motion, Inertia.js, Vite.
- **Backend & Architecture:** Laravel, Node.js, Express.js, RESTful API Design, Microservices, CI/CD.
- **Database & Cloud:** PostgreSQL, MySQL, Firebase (Auth, Firestore, Storage), Google Cloud Functions, Vercel.
- **Product Management & Methodologies:** Agile/Scrum, Product Requirements Documents (PRD), System Architecture, Role-Based Access Control (RBAC), Technical Documentation.
- **Tools & Integrations:** Git/GitHub, Postman, Stripe, Google Generative AI (Gemini), Figma, Trello.
- **Languages:** Arabic (Native), English (Fluent)

Certifications

Get Started with Databricks for Generative AI, Databricks Academy Jan 2026

Get Started with Databricks for Machine Learning, Databricks Academy Jan 2026

Get Started with Databricks for Platform Administration, Databricks Academy Feb 2026
